

MANAGING PARTNER DIRECTIVE

ATT Mr Tanaka Stones- Developer Team Head

REF: D.E.T S.M.A.R.T INTEGRATION GOALS

Introduction Document Status: LOCKED BASELINE VERSION 1.0

Preservation Protocol: This document constitutes the preserved baseline architecture for D.E.T S.M.A.R.T Integration Goals. No section, workflow, sequence, logic, requirement, process, control, entitlement, activation rule, subscription mechanism, scalability requirement, or architectural principle contained herein may be altered, removed, reordered, rewired, or reinterpreted unless expressly authorised by the Managing Partner. Future enhancements shall layer onto this framework without replacing or modifying the existing baseline.

1. SYSTEM OVERVIEW

1.1 Purpose **D.E.T (Disruptive Exousia Thermostat)** is a cloud-hosted trading intelligence and execution architecture connected to MT4/MT5 trading accounts.

The participant interacts with D.E.T through a desktop application called CornerStore.

CornerStore acts as the participant's:

- Trading Dashboard ▪ Signal Centre ▪ Trend Analytics Centre ▪ Automation Control Panel ▪ Subscription Validation Portal

The Core and the most important purpose of this integration is:

- 1) **The D.E.T Engine remains hosted within cloud infrastructure.**
- 2) **Participants do not receive the D.E.T Engine.**
- 3) **Participants receive only the CornerStore interface.**

2. HIGH LEVEL ARCHITECTURE

2.1 Cloud Components

Developer Team shall build and maintain the following D.E.T components of the dashboard named **CornerStore**:

2.1.1 D.E.T Engine as per attached screenshot Responsible for:

▪ Signal generation ▪ Trend calculations ▪ Risk calculations ▪ Trade management ▪ Grade validation ▪ Subscription management ▪ User authentication ▪ Account monitoring

2.1.2 Central Database

Stores: ▪ Participant profiles ▪ Payment records ▪ MT4/MT5 account numbers ▪ Grade assignments ▪ Login history ▪ Trade activity ▪ Activation status

2.1.3 Administrative Dashboard

Administrative functions shall include: ▪ Create users ▪ Suspend users ▪ Upgrade users ▪ Downgrade users ▪ View payments ▪ View account balances ▪ View active licences ▪ Force logout participants

3. PARTICIPANT REGISTRATION WORKFLOW

3.1 Stage One

Participant creates account. D.E.T System stores: ▪ Name ▪ Email ▪ Whatsapp Mobile Number ▪ Country ▪ MT4/MT5 Account Number

3.2 Stage Two

Participant selects Grade/Level. Examples: ▪ Amethyst ▪ Topaz ▪ Tanzanite ▪ Sapphire ▪ Other designated Grades

3.3 Stage Three

- a) Participant proceeds to payment.
- b) Payment Gateway processes payment.
- c) Supported methods to be determined.

Examples: Paynow ▪ Card Payments ▪ Bank Transfers ▪ PayPal ▪ Cryptocurrency ▪ Mobile Money

3.4 Stage Four

Payment verification occurs. Following successful verification: System creates:

▪ Subscription Record ▪ Activation Licence ▪ Login Credentials

4. FLOAT SIZE VALIDATION

4.1 Purpose: D.E.T pricing is based upon trading account float size. Developer Team shall implement automatic validation.

4.2 Workflow after activation: D.E.T System reads: ■ Account Balance ■ Equity ■ Float Size from MT4/MT5.

System compares: Actual Account Balance against Purchased Grade. For Example:

- a) Purchased Grade: Topaz
- b) Allowed Float: USD 200 – USD 1,000
- c) Actual Account: USD 7,500

Result: System automatically diverts participant to the correct designated Grade. **No manual intervention required.**

5. AUTOMATIC GRADE REALLOCATION

5.1 Purpose: Prevent users from subscribing to lower Grades than their actual account size.

5.2 Workflow D.E.T system determines: -

- 1) Actual account balance.
 - 2) System assigns:
 - 3) Correct Grade.
 - 4) System activates: Only the Grade corresponding to the actual account size.
-

6. PREPAID CREDIT WALLET

Developer Team shall create an Internal Credit Wallet. Purpose: To store unused prepaid value for Example:

- a) Participant prepays subscription entitlement.
 - b) If account later moves to a lower Grade:
 - c) Unused value remains stored.
 - d) System automatically consumes remaining credit over future subscription periods.
 - e) **No automatic refund process shall occur.**
-

7. CORNERSTORE ACTIVATION

7.1 Installation

- a) Participant downloads CornerStore.
- b) Participant installs application.

7.2 First Login

Participant enters: ■ Username ■ Password ■ Activation Key CornerStore sends authentication request to cloud infrastructure.

Cloud validates: ■ Subscription Status ■ Grade Status ■ Account Eligibility. Access granted upon successful validation.

8. CORNERSTORE DASHBOARD REQUIREMENTS

The attached CornerStore interface herein above, represents baseline architecture. Developer Team shall modularise the interface to copycatting the following as is: -.

8.1 LongTrader Module: - Display Current Long-Term Trend Status.

8.2 SwingTrader Module: -Display Current Swing Trend Status.

8.3 DayTrader Module: -Display Current Day Trend Status.

8.4 IntraTrader Module: -Display Current Intraday Trend Status.

8.5 ScalpaTrader Module: -Display Current Scalping Trend Status.

8.6 Real-Time Analytics Module: -Display Current Highest Priority Market Direction.

9. AUTOMATION CONTROL PANEL

Required Controls:

9.1 BUY: - Allows participant to permit D.E.T Buy activity.

9.2 SELL: - Allows participant to permit D.E.T Sell activity.

9.3 AUTO: - Allows D.E.T Automation. With Modes: - ■ ON ■ OFF

9.4 SWITCH TRADER

Allows switching among: ■ LongTrader ■ SwingTrader ■ DayTrader ■ IntraTrader ■ ScalpaTrader according to entitlement permissions.

10. TRADE EXECUTION

When AUTO = ON

D.E.T System should start to: ▪ Open trades ▪ Modify trades ▪ Apply Stop Loss ▪ Apply Take Profit ▪ Apply Trailing Stops

11. ACCOUNT DOUBLING RULE

11.1 Triggers if account reaches 100% gain after D.E.T activation. For Example: -

- a) Starting Balance: USD 5,000.
- b) Trigger happens at: USD 10,000

11.2 System Actions Immediately: ▪ Disable new trade entries ▪ Lock participant trading privileges ▪ Logout participant ▪ Preserve existing trades

12. POST-LOGOUT TRADE MANAGEMENT

After logout: D.E.T continues managing existing open positions.

Permitted actions: ▪ Maintain Stop Loss ▪ Maintain Take Profit ▪ Trail Positions ▪ Close Positions
until all trades close. Participant cannot create new trades during this state.

13. ZERO-HEDGING MODULE

13.1 Zero hedging is triggered when account doubles.

13.2 Function: System monitors all open positions. When combined exposure approaches breakeven:

System closes all open positions automatically. Objective: Exit account exposure at minimal loss as possible.

14. REACTIVATION PROCESS

Following an account doubling event: Participant purchases a new subscription.

System: ▪ Unlocks account ▪ Restarts D.E.T ▪ Enables new trade entries

15. WITHDRAWAL MONITORING

System records all withdrawals. Developer Team shall create logic to adjust the account doubling target.

Example: -

- Starting Balance: USD 1,000
- Target: USD 2,000
- Withdrawal: USD 1,00
- Adjusted Target: USD 900

16. OPEN TRADE TAKEOVER WARNING

If participant installs D.E.T onto an account containing open trades:

- a) System displays mandatory warning.
- b) Participant must acknowledge warning before activation.

Possible actions include: ▪ Adopt Trades ▪ Modify Trades ▪ Trail Trades ▪ Close Trades ▪ Add Stop Loss ▪ Add Take Profit

Activation may only proceed after acknowledgement.

17. SCALABILITY REQUIREMENTS

Infrastructure shall support:

Phase 1: 100 Users

Phase 2: 1,000 Users

Phase 3: 10,000 Users

Phase 4: 100,000+ Users

without major redesign.

18. COMPLIANCE REQUIREMENTS

CornerStore shall permanently display:

- Not an Investment Institution ▪ Not an Investment Advisor ▪ No Guarantees ▪ High-Risk Warning ▪ Terms & Conditions

prior to automation activation.

The Core and the most important purpose of this integration is:

- 1) The D.E.T Engine remains hosted within cloud infrastructure.**
- 2) Participants do not receive the D.E.T Engine.**
- 3) Participants receive only the CornerStore interface.**

This D.E.T S.M.A.R.T Integration Goals Version shall be preserved as D.E.T Baseline Architecture
